Ranunculus, Lago Giant Mixed

RANUNCULUS

This most beautiful spring blooming flower has won the favor and esteem of flower lovers in a most amazing manner during the past few years, and for very definite reasons: aside from its glory of color and exquisite beauty, few other flowers bloom so prolifically and are so easy to grow.

The attractive double and semi-double flowers come in bright colors of red, pink, rose, yellow, and white, as well as intermediate shades. Their long, graceful stems and delicate foliage with their attractive colors make them unexcelled for cut flowers and they are equally attractive in the border or bed in the garden.

Lago Giant Ranunculus

One of the reasons for the increasing popularity of the Ranunculus is the gradual improvement of this flower. Particularly is this true in the Lago Giant Strains which produce a large percentage of double flowers as well as large individual blooms in most attractive shades.

Lago Giant Mixed. The result of years of expert selection. It is, we believe, the finest strain, producing a large percentage of giant double flowers as well as attractive semi-double flowers in a wide range of beautiful shades. 50c per doz.; \$3.50 per 100.

CHINESE SACRED LILY

Outdoor Culture: Plant bulbs 4 to 5 inches deep, 8 to 12 inches apart.

A species of *Polyanthus Narcissus* introduced from China. The bulbs are large, measuring 8 to 10 inches in circumference, and throw up from five to ten flower spikes, bearing clusters of large, perfect, waxy blossoms, with yellow centers and having a most delicious fragrance. They may be grown in pots, but are most successful when cultivated in water the same as in China. A dozen bulbs planted at intervals in bowls with enough gravel to hold them upright will give a profusion of bloom during the winter months. Large bulbs, 10c each; \$1.00 per doz.; \$7.50 per 100.

POLYANTHUS NARCISSI

PAPER-WHITE GRANDIFLORA. This is the most satisfactory bulb that can be grown in the house for winter blooming. Bulbs placed in a bowl in water and pebbles will bloom in from 6 to 8 weeks from time of planting, and are superior to Chinese Lilies. The flowers are larger, more attractive in color, and very fragrant. A very unique and simple way to grow this variety of *Narcissus* is to place six to eight bulbs in a shallow glass or china bowl in water, supporting the bulbs with pebbles or gravel as you would the Chinese Lily, and place the bowl in the dark until the roots have started, when you should bring them to the light. The water requires changing occasionally to keep it pure. Do not add cold water; see that it is slightly warm. Plant any time in September or October, they can be easily brought into flower by Christmas. They can also be planted later to provide a succession of bloom. Bulbs, 5c each; 50c per doz.; \$3.50 per 100.

Outdoor Culture: Plant bulbs 4 to 5 inches deep, 6 to 8 inches apart.

GRAND SOLEIL D'OR (The Yellow Paper-White). This splendid *Narcissus* is in many ways similar to the Paper-White *Narcissus* but the blooms are an intense yellow color, with the center of the cup shaded orange. It may be grown in pebbles or fiber, the same as the Paper-Whites offered above. Bulbs, 10c each; \$1.00 per doz.; \$7.50 per 100.

Field Seeds for Fall Planting

LADINO CLOVER

The Wonderful Pasture Clover

Since its introduction several years ago the acreage planted to Ladino Clover has steadily increased. Ladino, it might be said, is right at home on California irrigated lands. It will give more feed per acre than any other Clover and give it economically as it can be pastured. Ladino increases the milk-flow of cows and makes the finest pasture and fattening feed for sheep. Poultrymen find Ladino one of the best "greens" for chickens, turkeys, etc. It produces abundantly its succulent growth and lasts practically the entire year. On many types of land where alfalfa does not do well on account of heavy clay or shallow soils, Ladino grows luxuriantly. All classes of stock are very fond of Ladino and prefer it to any other Clovers or grasses. **Lago Brand Genuine Ladino Clover.** \$1.00 per lb.; 10 lbs., 90c per lb., postpaid. Write for prices in larger quantities.

LAGO BRAND EVERGREEN PASTURES

Evergreen pastures in California are now a reality. With Lago Brand Evergreen Pasture it is now possible to have a nice green pasture throughout the year. Ladino Clover was responsible for the growth of Evergreen Pastures because it was found that some varieties of grasses along with the Ladino not only improved the feed as far as the health of livestock is concerned, but with grasses added it is possible to increase the production of green feed over a longer period than when only Ladino is used. With grasses added to Ladino the danger of bloat is also minimized. Our mixtures have been compounded from experiences gathered over a period of years. Lago Brand Green Pastures will give you high production of green feed per acre throughout the year.

Special Mixtures. For some sections special mixtures are available. Write for information and prices.
